

# Wood'n Light

Design by

Patrick Fasshauer 2007

ofórm introduces **Wood'n Light** – one piece of furniture with twofold appearance. By day, **Wood'n Light** looks like a classic furniture board. In the evening, the board glows through the integrated LEDs and thereby appears to float on the wall. The luminous wood newly interprets the natural wood structure.

Through the fourth dimension of light, Patrick Fasshauer transforms the classic board into a fascinating light object. The special assortment of impressive wood types gives this element a one-of-a-kind appearance. The well thought-out lighting design technology is discretely hidden.

ofórm developed **Wood'n Light** as a system for a panel wall which is producible in different lengths.

**Wood'n Light** – the board that glows in the dark
